

EIS Dashboard empowers business executives with powerful Web-based Executive Information System for Decision Support

# EIS Dashboard™

**Knowledge Base EIS Dashboard** is a web-based Executive Information System that is designed to provide business users and decision makers to proactively monitor, analyze and identify performance, trends, risks and opportunities through a customized, visual presentation of critical information.

## FEATURES

**EIS Dashboard v3.1** comes with the following built-in features and capabilities:

- **Visually Rich** provides visually rich look and feel, drag-n-drop, slice-n-dice interface. Also supports Web-charts, Cross-tabs, GIS interface and Hot-spots etc which are configurable.
- **Alerting Engine.** Users will be able to set threshold to any indicators and the system will alert when the threshold is met either via Dashboard, email and SMS.
- **Drill-down and Drill-Through.** User can drill-down and drill-through from summary to detail data.
- **Email Interface.** Ability to email contents of the dashboard to users.
- **Web Publish.** Publish, export or save any portion of the EIS content as Image, Excel or HTML report for sharing.
- **Dynamic Refresh.** The Dashboard can be updated in real-time.
- **Observation/Remarks Capture.** All observations and qualitative analysis will be captured so that other users will be able to share and view observations by other users. This is powerful feature as a true Decision Support solution must support both Quantitative and Qualitative Analysis.
- **KPI Navigator.** Includes a KPI navigator to view KPIs.
- **Personalization.** The Dashboard can be personalized to suit individual need.
- **Traffic Lighting.** Provide configurable traffic lightings for easy visuals.
- **Actual, Plan and Variance Analysis.** Ability to enter budget/plan figures to plot variance.
- **Application Launch Pad.** The Dashboard can be integrated to other application e.g. OLAP and Reports which can be launched directly.
- **Integration to OLAP engine.** Since Dashboard is based on Microsoft .NET technology, it can be seamlessly integrated to Microsoft Analysis Services and Analytica™
- **Reporting Dashboard.** Provides reporting dashboard to launch standard and ad-hoc reports. Also provides security access controls.
- **Ad-hoc query.** Provides an ad-hoc SQL query to browse data using drag-n-drop approach with zero programming.

## Visual Analysis and Alert Detection

**EIS Dashboard** provides a visually rich graphical and web-enabled environment to rapidly build and deploy Executive Information System. Executive Information dashboards are usually catered for Senior Executives using a simple point-in-click and slice-n-dice metaphor. **EIS Dashboard** easily spotlights areas that need attention before situations become critical and costly by highlighting key measures. Drill-down capabilities provide you with the flexibility to trace problem areas directly to the source. The trend-analysis, variance analysis, time series analysis and traffic lighting features provide a powerful visual environment to monitor and set threshold for any measures. **EIS Dashboard** enables you to take in the "big picture" at an overview level or drill right down to the transaction level to get the detail.

## Rapid Application Development & Prepackaged Application

**EIS Dashboard** is developed using Knowledge Base EIS Development Toolkit, which enables to develop EIS applications rapidly, saving almost 70 to 80% of effort when compared developing from ordinary application development tools. EIS Development Toolkit comes with pre-built component libraries, control gadgets and parameterized routines to minimize the development effort. EIS Toolkit supports royalty free run-time so that there are no additional licenses required for every machine. EIS Dashboards comes also comes with industry standard jump-start solution packaged solution for various industries such as Banking/Finance, Telco and Healthcare. **EIS Dashboard** prepackaged solution comes with key performance indicators and a proven data model. Whether you need to respond to new information by the minute, hour, day, week or month, **EIS Dashboard** is the solution to your decision support needs.

**kbase** >>

**EIS Dashboard** enables you to take snapshots of your data whenever you need it. These data views can be refreshed automatically, so that you can literally watch changes as they happen. An example might be watching your daily Loan Analysis graph grow as the loans are disbursed, and at the same time, comparing the actual results against your plan.

With **EIS Dashboard** you can proactively identify trends, risks and opportunities through a customized, visual presentation of critical information. This enables you to produce a full range of displays, reports, and graphs, all custom designed to fit your organization. In addition, different users can have different views into data, so that they can analyze information specific to their job functions.

### Managing eBusiness Intelligence

Knowledge Base EIS Dashboard™ is a part of Knowledge Base business intelligence solutions. These innovative solutions enable organizations to satisfy analytical application such as Financial, Customer and Product Intelligence application demands while driving new business initiatives and revenue streams.

**EIS Dashboard** solutions help customers identify new market opportunities, support “one-to-one” marketing programs and allow organizations to learn more about their suppliers, distributors, customers, partners and employees.

Combining these powerful features, it offers a unique advantage—the delivery of the right information to the right people at the right time—all in a personalized way.

**EIS Dashboard** supports extensive data sources such as:

- > SQL Server
- > ORACLE
- > DB2
- > Any ODBC compliant database

### Knowledge Base Business Intelligence Services

Knowledge Base also offers an extensive range of services to help an organization accelerate a project’s successful completion and increase ROI. Offerings range from initial assessment, product implementation and integration projects, to migration services, premium support offerings and staff education. Knowledge Base Professional Services can help organization to build, deploy and leverage dynamic and web-based business intelligence applications cost effectively.

Knowledge Base continually enhances products as new technologies and components become available. Knowledge Base, therefore, reserves the right to change specifications without prior notice.
